

AODGrants for Healthcare

Get the funding you need for the technology you want - **FREE**

Introducing AODGrants for Healthcare from Add On Data and Grants Office

AODGrants is a value-added service that enables Add-On Data to provide our clients with FREE up-to-date grant information to maximize your exposure to the funding that is available for Healthcare technology projects. Through this program, you now have 24/7 access to one of the most comprehensive, online grants databases available today, as well as one-on-one consulting from grants experts any time you need it. Whether it is federal, state, or private sources, AODGrants makes it easier for your organization to maximize your funding potential.

More Grant Funding Than Ever Before.

Every year, the federal government provides approximately \$400 billion in grants for a wide range of purposes. The passing of the American Recovery and Reinvestment Act in 2009 may double or even triple that amount in 2009, 2010, and into 2011—making this the best time ever to learn more about your funding options.

Grants Intelligence At Your Fingertips.

Add-On Data has exclusive access to the AODGrants Online Knowledge Base. Updated daily, this comprehensive resource enables us to search and browse available grants 24/7 and receive email alerts when new grants are added that match your pre-defined parameters, opening a new world of funding opportunities from a wide range of sources.

Expert Guidance When You Need It.

The AODGrants Helpdesk Support Service provides your organization exclusive access to the subject matter experts for customized consulting. These experts can prepare research reports, recommend appropriate grants, and participate in consultative conference calls, between you and your ADD-On-Data representative.

To learn more about how AODGrants can help you fund your next technology project, contact a member of our grant team to set up a meeting today!
