

Point of Care Consulting Services

Hospitals and healthcare organizations face mounting pressure from payers, regulatory agencies, and consumers to demonstrate improved medical outcomes, patient safety, and lower costs. Regulations surrounding EMR roll-out, combined with stimulus funds and other incentive programs, are encouraging the rapid implementation of new patient care technology. This rapid EMR roll-out, coupled with the convergence of technologies impacting the patient care process, pose real challenges for healthcare IT professionals and clinicians

Healthcare IT decisions are now critically important and IT professionals must understand how their technology-related decisions can have a huge impact on patient care, from causing inconvenience or frustration for the care giver to causing significant impact to their workflow and efficiency. Selecting the best-of-class products/vendors, focusing on workflow changes and architecting solutions to achieve optimal benefits requires a patient-centric approach to technology acquisition and deployment, in addition to an unprecedented level of collaboration between health care providers, IT, technology vendors, and others.

For over 30 years, Add-On Data has been dedicated to helping healthcare organizations get the most out of their technology infrastructure, allowing in-house teams to concentrate on servicing their internal clients and realizing department goals. Our can-do attitude and strong understanding of clinical work-flow in health care organizations allows Add-On Data to achieve significantly higher client satisfaction rates and repeat business. We are in a unique position to advise you in the assessment, selection, purchase, installation, integration and maintenance of point-of-care (PoC) equipment and technology that enhances overall patient care, education, and research.

OUR POINT-OF-CARE SPECIALISTS CAN HELP WITH:

- Technology Assessments of Current and Future Needs
- Technology Inventory and Condition Analysis
- Point-of-Care product selection (mobile carts, stationary arms, hybrid systems)
- Custom solutions for your unique demands
- IT Strategy Development and Planning
- Infrastructure Optimization
- Technology Retrofit, Upgrades and Modernization
- Infrastructure design and implementation
- Systems integration
- Technology Proposal/Bid Management and Evaluation

Whether it is to updating and refreshing your existing fleet of Point-of-Care Computer Carts or deploying a variety of Point-of-Care technologies in a new clinical/patient care building, Add-On Data will help you select the best solution — avoiding costly mistakes — providing you with the greatest benefit while operating within your unique business constraints. As a technology solution provider with significant healthcare experience, Add-On Data offers a unique service — we know the manufacturers and distributors, we know product costs, we know deployment and implementation.

Add-On Data can help you make the right decision based on your specific needs and requirements.

Our experienced professionals can turn your healthcare technology investments into a powerful advantage.
